

COSHH

About this course

COSHH is the common acronym for the Control of Substances Hazardous to Health and is an important piece of health and safety legislation. In this course, the legislation and regulations relating to COSHH are covered, including the symbols used to warn of the presence of hazardous substances.

The course also covers how harmful substances can enter the body and the actions that can be taken to mitigate the risks. This includes the hierarchy of control measures and conducting risk assessments.

Suitable for:

Almost all employees potentially come into contact with hazardous substances and would benefit from awareness training.

Course covers:

Types of hazardous substances and where they can be found.

Health and safety legislation and regulations.

How hazardous substances enter and affect the body.

Hazardous substance labelling.

Control measures and good practice.
